Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1, 3-5, 7-13, 15, 16, 28-35 and 63-78 are rejected under 35 U.S.C. 103(a) as being unpatentable over Glenn, of record. As stated in the previous action, Glenn shows an imaging device with a transparent element adhesively attached to a die and having an adhesive flow restricting area. As seen in Glenn, the areas on the transparent element which would serve to restrict the flow of adhesive toward the active element may take on different shapes and configurations. See, for example, the variations shown in FIGs 13-19.

In addition to grooves and notches, one can consider the outer edges of the transparent element shown in FIGs. 13-16 to constitute protuberances that engage the adhesive flow, and would inherently serve to slow and restrict the flow of the adhesive as it moves toward the active area of the chip.

Similarly, these restriction areas are configured on the perimeter of the transparent element, and thus, they also form a perimeter around the imaging elements in the active area.

As stated in the previous action, the features of the dependent claims are shown by Glenn, as well.

Allowable Subject Matter

Claims 18-22 are allowed.
